

Modern Motor-Vehicles.

By C B Rooke Evenlyn Bell Crompton

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: .rather difficult to understand; it would be better if it were stated that that was the vaporizing temperature, the fuel being gasolene. The temperature of the fuel before it was supplied to the generator was probably about 60. The temperature of the steam was shown to be at the boiler 353 of superheat, and at the engine 285 of superheat. The exhaust temperature, 288, seemed to be higher than the engine temperature initially. It would probably be better to show the initial temperature on the same scale as the exhaust temperature. The cut-off was stated to be at three-fourths of the stroke, and the very low consumption of fuel and water seemed particularly astonishing in view of that late cut-off. The Author. The Author pointed out that the engine was a compound engine, the cut-off being in the first cylinder only. Mr. Clarkson. Mr. Clarkson considered...

Reviews

The ideal ebook i possibly go through. It generally does not cost an excessive amount of. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Vincenza Hand**

It is fantastic and great. It is written in easy words and phrases instead of confusing. I am just delighted to explain how this is actually the best book i have got read through during my individual life and might be the finest publication for ever.
